¹ "The" is used to refer to the specific group of people who are the focus of the study, rather than to the general population.

1. The first group of authors (e.g., [1, 2]) considers the problem of the stability of the motion of a system of particles in the field of a central force. The results of these authors are in qualitative agreement with the results of the present work.

1. The first group of variables includes the variables that are used to define the sample, such as the year, the country, and the industry. These variables are used to control for the effects of time, geography, and industry on the dependent variable.

[illegible]
